

CYBEREASON DEFENSE PLATFORM

On-premise option for complete control of your endpoint security

KEY BENEFITS

- » Save time and resources with a single, on-premise agent deployment for both prevention and EDR
- » Visibility into your environment to detect and prevent cyber attacks
- » Leverage existing storage and proprietary integrations
- » Control all sensitive data and access, within your IT environment
- » Address strict data-security and regulatory requirements including air-gapped deployments

ABOUT CYBEREASON

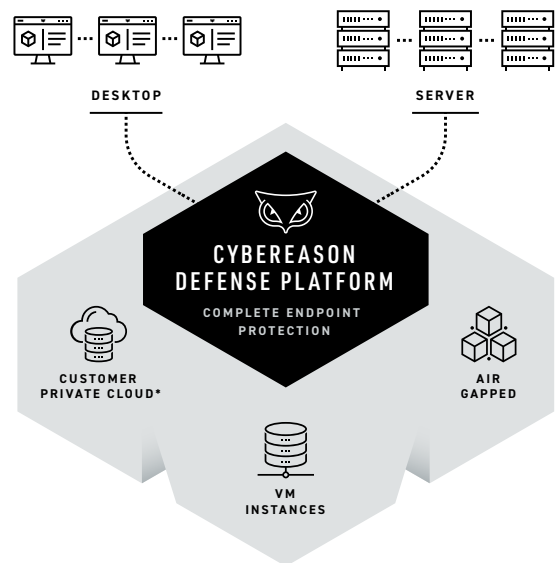

The Cybereason Defense Platform combines managed endpoint prevention, detection, and response in one lightweight agent. The platform leverages advanced techniques to prevent known and unknown threats. It also brings behavioral and deception techniques to prevent ransomware and fileless attacks. Combine the best platform on the market with expert implementation and support services from our security team for highly comprehensive defense against sophisticated cyber attacks.

ON-SITE ENDPOINT SECURITY

Endpoint security is a constant balancing act between safeguarding data and allowing employees to conduct business while at the same time dealing with a never-ending barrage of cyber threats. This balancing act is further complicated when IT and security teams explore options on how to best deploy security for the endpoints within their IT environment.

Many think it is a forgone conclusion that all of today's enterprises want a managed endpoint security solution. In fact, Gartner predicted "security services will account for 50 percent of cybersecurity budgets by 2020." Despite this prediction and trends, many enterprises still don't have complete on-premise control and autonomy of their sensitive data due to the security posture or line of business in which they operate. The decision of "going on-prem" includes key concerns around management of the entire IT stack, handling or access of sensitive data, and strict governance mandates.

*PLEASE CONTACT A CYBEREASON EXPERT FOR ADDITIONAL DEPLOYMENT DETAILS

COMPLETE ON-PREMISE ENDPOINT PROTECTION

Cybereason offers customers an on-premise deployment for their endpoint protection, for both prevention and endpoint detection and response security needs within a single agent.

With multiple on-premise deployment options, enterprises who want to gain deep visibility into user activity and processes within their custom environment can leverage the native behavioral and correlation logic of the Cybereason Defense Platform. Customers are able to prevent known and unknown attacks as well as detect advanced attacks before damage can be done by malicious threats while maintaining their IT autonomy and mitigate IT supply chain risk.

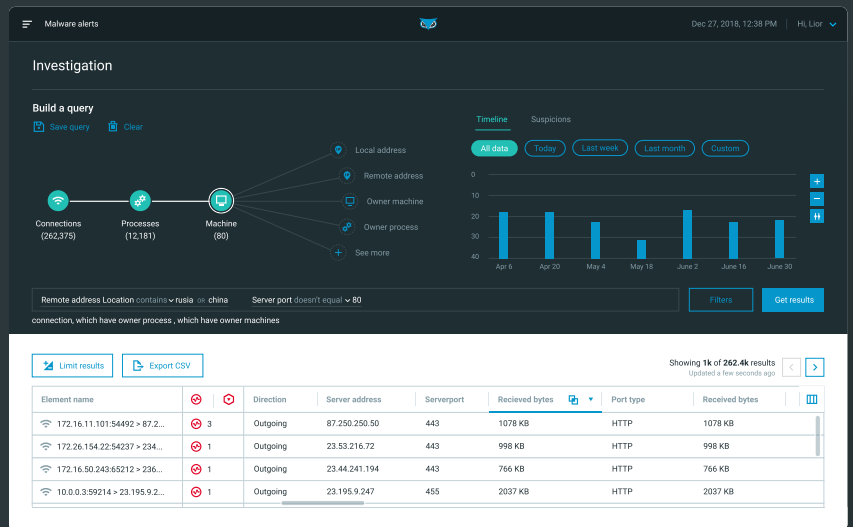

Cybereason Defense Platform customers save both time and resources with:

- » Single-agent deployment
- » Single console to manage threats with a high degree of accuracy
- » Single-click remediation across all impacted devices

ENDPOINT PROTECTION & CONTROL

Government or military agencies, critical infrastructure, financial services or those that conduct business with them can deploy the Cybereason Defense Platform to satisfy stringent security and data regulatory requirements.

With the on-premise deployment your IT team can manage and maintain the application in accordance with specific governance and auditing criteria. The best part is they can utilize existing infrastructure to customize and test as needed and leverage the desired disaster recovery and proprietary integrations already in place.

UNIQUE FEATURES

REDUCE THIRD-PARTY & SUPPLY-CHAIN RISK

COMPLETE ON-PREMISE ENDPOINT PROTECTION

ONE AGENT, COMPLETE SET OF PREVENTION & EDR CAPABILITIES

BEHAVIORAL-BASED DETECTION & PREVENTION

ANALYST-BASED WORKFLOWS AND ONE-CLICK REMEDIATION

ON-PREMISE DEPLOYMENT INCLUDING HYBRID & AIR-GAPPED OPTIONS

With on-premise endpoint protection from Cybereason, your IT and security teams have complete control of the IT stack to manage and secure your organization's sensitive data in a way that best fits your business and regulatory requirements. You can even include the option of an air-gapped deployment.

Give your team a full-featured endpoint protection platform designed to detect, analyze, and remediate against highly advanced threats, both known and unknown. This solution allows on-premise based organizations to correlate data across all impacted machines and generate contextualized alerts to address threats as they're discovered at any point in an attack chain.

Your analysts (no matter how experienced) can easily investigate incidents and respond to high-fidelity alerts from a single screen. Your security team can view the entire process tree with a complete timeline of events, for all malicious activity, across every machine and every process. Simplified workflows, single click remediation, and advanced search or hunting capabilities are all geared towards maximizing the expertise of your team without incurring additional overhead.

Deploy the Cybereason Defense Platform solution with confidence and help your security team automatically prevent threats, uncover attacks, and hunt for malicious activities all while maintaining control over your sensitive data.
