

CYBEREASON REMOTE WORKFORCE PROTECTION

Fully Managed Prevention, Detection, and Response Across Devices

The expansion of the IT landscape directly impacts your IT team. Trying to simultaneously maintain business continuity while also defending a totally remote workforce is a complex issue with heightened risks.

To help organizations across all verticals secure their new, evolving-everywhere office, Cybereason is offering a [Remote Workforce Protection](#) solution built to ease the burden on IT and security teams during this challenging time. Cybereason can augment and support your business with the power of the Cybereason Defense Platform and a team of elite cybersecurity professionals.

WHY CYBEREASON REMOTE WORKFORCE PROTECTION?

Employee efficiency and business urgency should not compromise security. The Cybereason [Remote Workforce Protection](#) offering combines Cybereason NGAV multi-layered prevention, EDR analysis, hunting and response, with Cybereason MDR to manage it all for you, and up to 20 hours of remote incident response services. **All from a single agent, a single console, and one team to protect it all – across workstations, laptops, and mobile devices.**

CYBEREASON NGAV

Automatically prevent known and unknown threats across your enterprise-wide deployed endpoints (Windows, Mac, Linux, iOS, and Android). Leverage behavioral ransomware, deep script visibility, and deception techniques to prevent any malicious execution.

CYBEREASON EDR

Prioritize, understand, hunt, and root-out advanced adversaries lurking across your environment through the full attack scope and tailored response action, reducing your security team mean-time-to detect and respond.

CYBEREASON MDR

Apply the best response for a variety of threats automatically – every time, all the time. Minimize risk exposure with continuous threat monitoring and response infused with up-to-the-minute threat intelligence. Hunt with unprecedented speed and scale without the overhead of false-positives, complexity, and cost.

UNCOVER MOBILE THREATS

Protect mobile devices with behavior-based analysis to uncover suspicious activity like malicious mobile apps, abnormal north-south network connections, and OS vulnerabilities. Defend the full array of mobile threats to empower security teams to prevent and remediate advanced threats completely missed by legacy endpoint controls.

CYBEREASON REMOTE INCIDENT RESPONSE (IR)

With Cybereason Remote Incident Response, the Cybereason team proactively provides organizations of all sizes and maturity levels with offensive-mindset access to the knowledge, tools, and resources to contain, eliminate, and root out threats across your remote and cloud-operated dynamic environments.

KEY BENEFITS OF REMOTE WORKFORCE PROTECTION

- » A flexible rate and three-month offering for fast, managed protection for remote employees
- » Peace of mind with outsourced best of breed EPP and EDR solutions, fully managed by Cybereason experts
- » Secure every device with real-time endpoint visibility wherever machines are running
- » Easy to deploy, configure, and monitor with no impact to CPU or user activity
- » Leverage Cybereason experts for fully remote investigation and response to threats

DEPLOY QUICKLY

Deploying new technology, let alone managing it, can be difficult. To make this transition as smooth as possible, the Cybereason team is on stand by 24/7, ready to work. With experience defending millions of endpoints, the Cybereason team is prepared to address your current needs tailored to your security maturity across deployment, configuration, detection and response, and complete compromise prevention. The Cybereason team empowers your IT and security teams to focus on keeping the business up and running during this new and unexpected transition.

THE CYBEREASON DIFFERENCE

Cybereason is transforming the way companies approach prevention, threat detection, analysis, remediation, and incident response. Cybereason has developed a more effective way to engage and combat the complex challenges that are rapidly changing the cybersecurity threat landscape. Organizations require a security operation program and expertise that can orchestrate at scale. Powered by the Cybereason Defense Platform, defense-in-depth across the enterprise is turned on by default and enables the Cybereason team to perform efficient and innovative analysis and remediation. This process is designed to stop attackers causing business disruption.

ABOUT CYBEREASON

The Cybereason Defense Platform combines managed endpoint prevention, detection, and response in one lightweight agent. The platform leverages advanced techniques to prevent known and unknown threats. It also brings behavioral and deception techniques to prevent ransomware and fileless attacks. Combine the best platform on the market with expert implementation and support services from our security team for highly comprehensive defense against sophisticated cyber attacks.
